

Module 1: Introduction to Azure DevOps

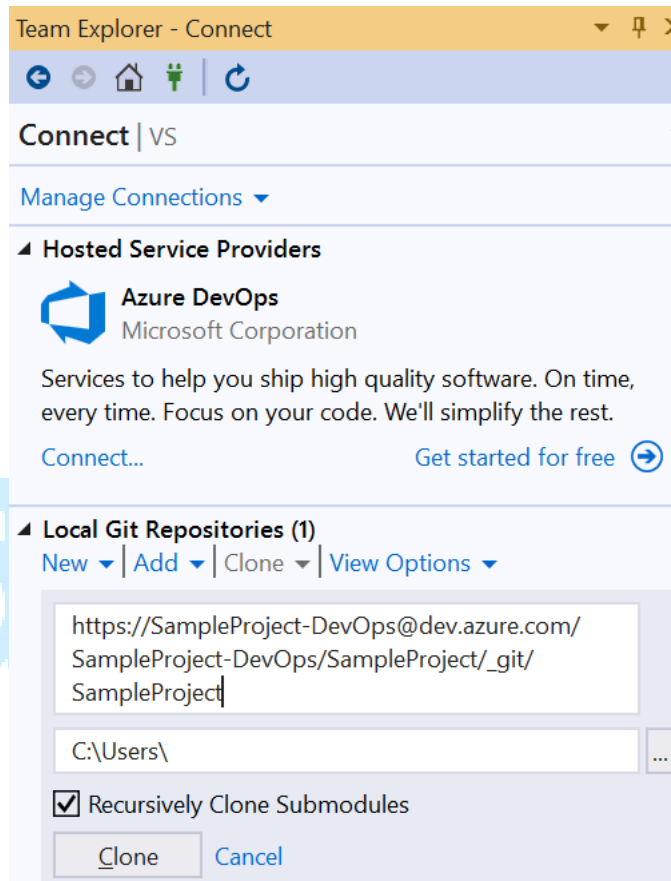

Demo - 4

Demo 4: Using Git with Visual Studio Code Editor

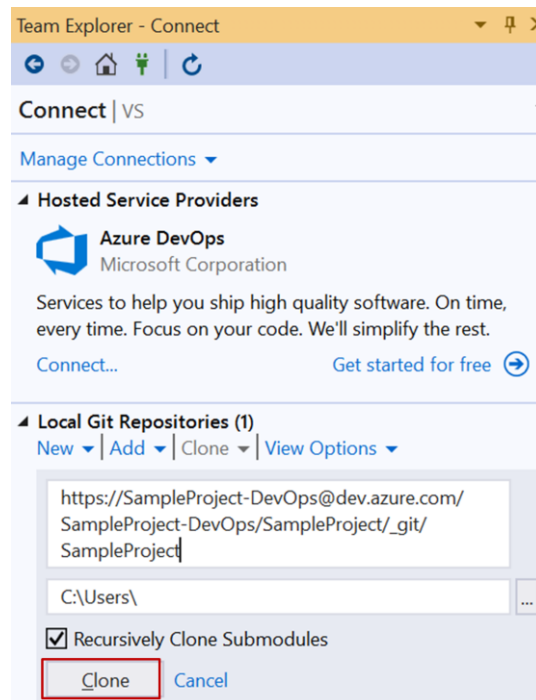

Solution:

Step 1: Download Visual Studio Code from the URL: <https://code.visualstudio.com/download> and open the Visual Studio Code or Visual Studio.

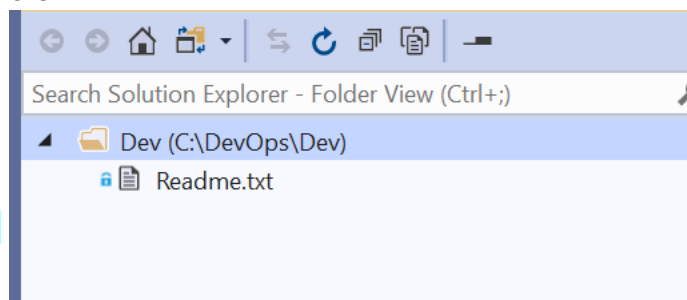

Step 2: Go to Team Explorer, click on the Clone button and enter the details as shown below. Enter the destination folder where you want the code to be downloaded.

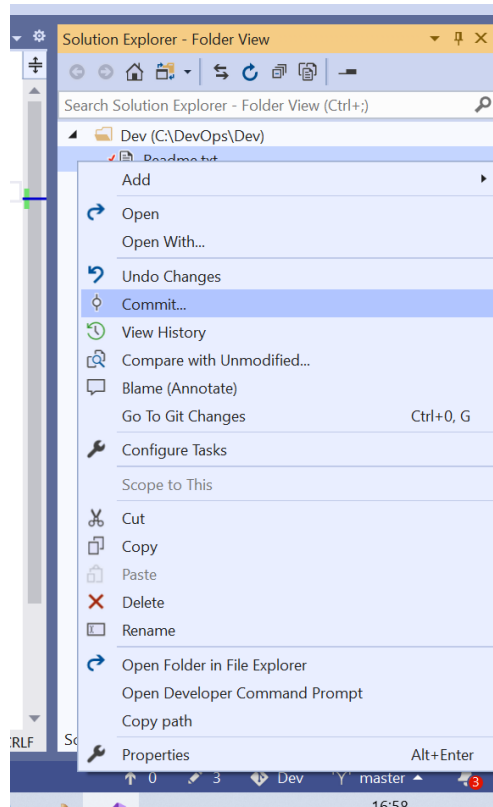

Step 3: Click on Clone.

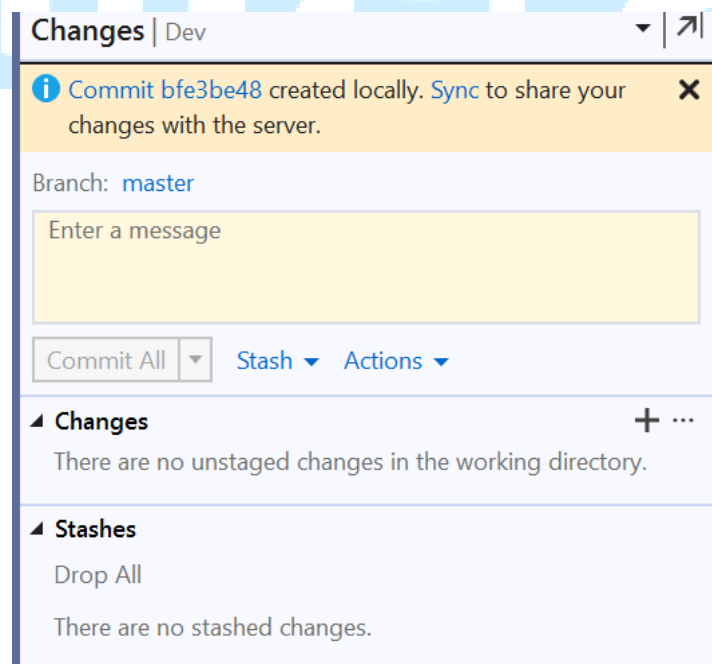

Step 4: Switch to solution explorer

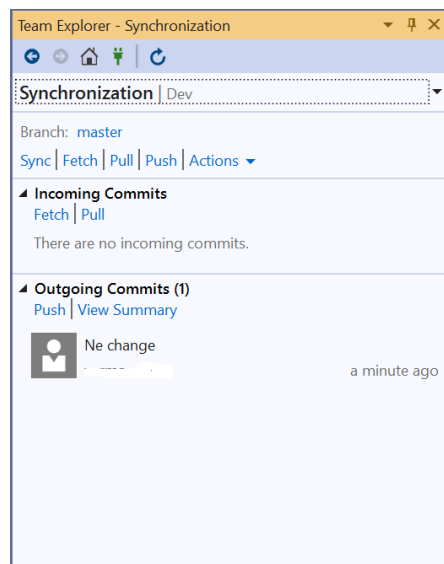

Step 5: Open the Readme.txt and make some changes. After making changes, right-click on the file and commit it with some commit message.

Step 6: Click on Sync to share the changes with the server.

Step 7: Push the changes by clicking on the Push-button. This will merge the changes to the main branch/Master.

Step 8: To see the version history, right-click in the file and click View History. This will show all the historical changes in the file.
