

Module 1: Introduction to Azure DevOps

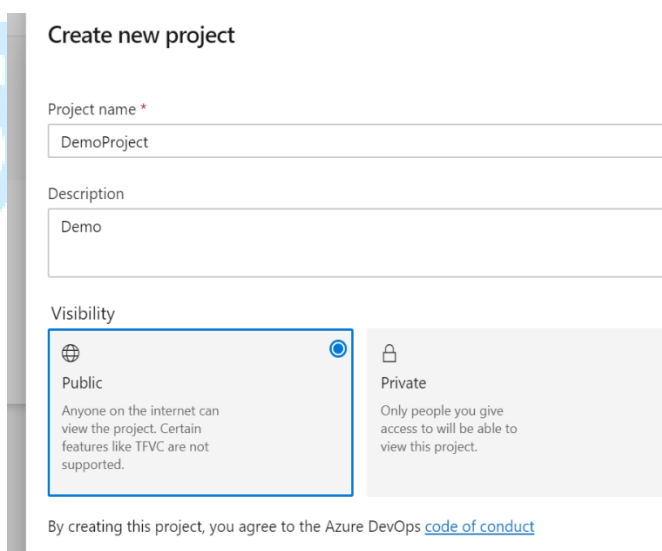

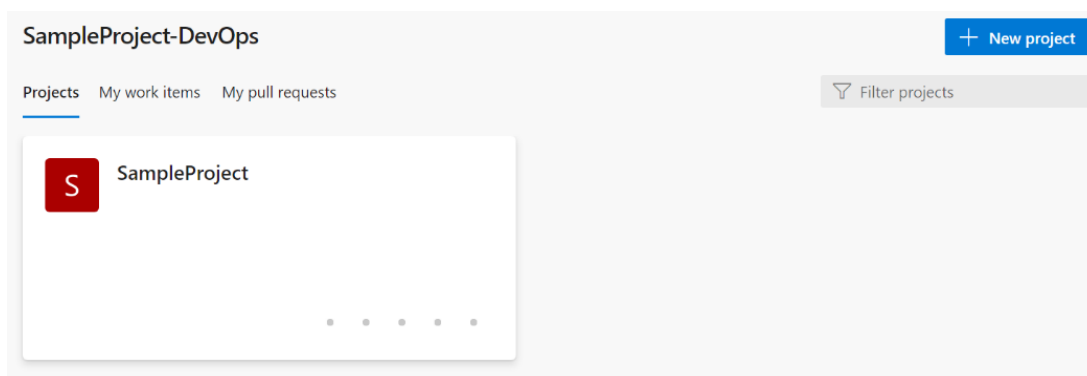

Demo - 5

Demo 5: Code Review with Pull Requests

Solution:

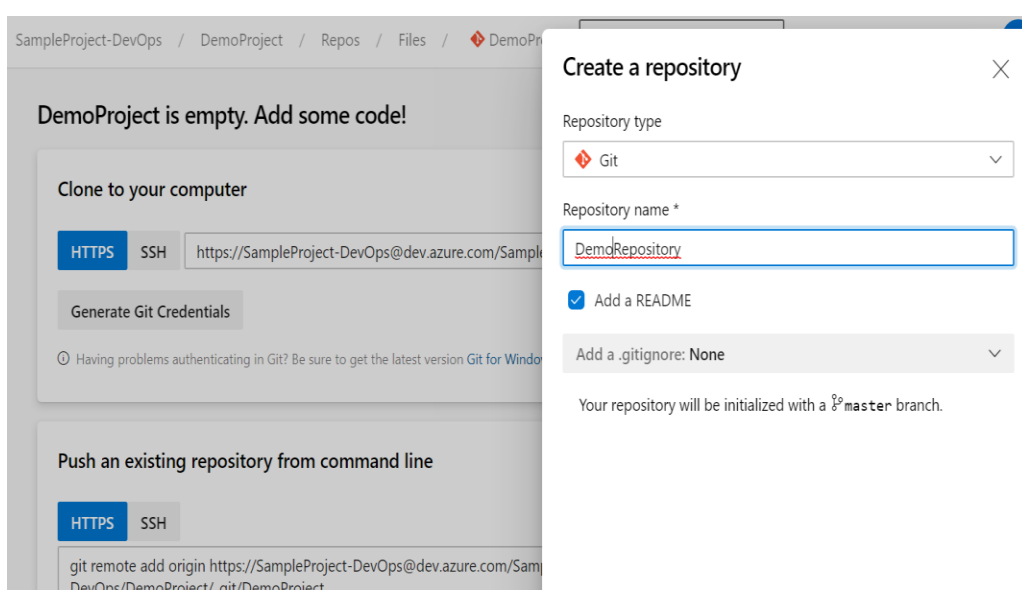

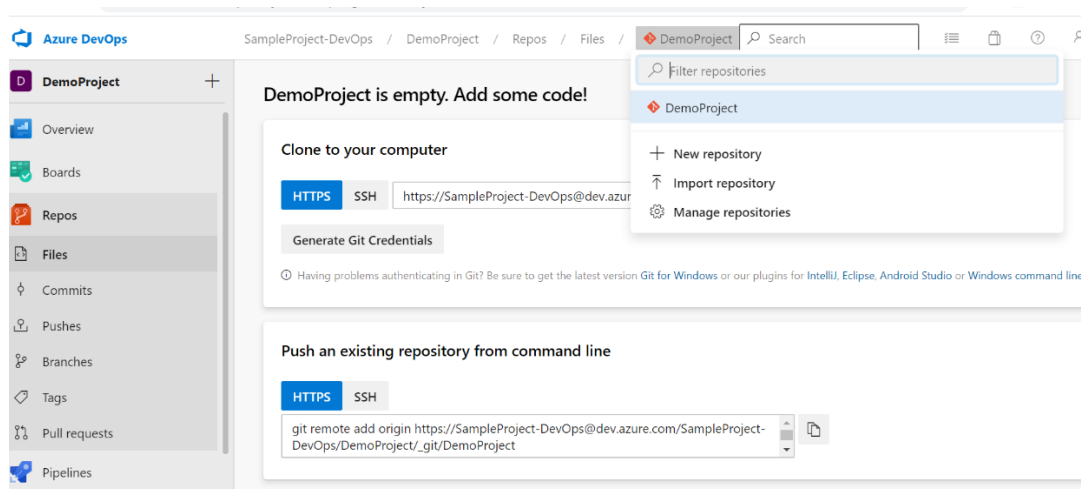

Step 1: Go to <https://dev.azure.com/> and create an account.

Step 2: Create a sample project by clicking on “New Project”.

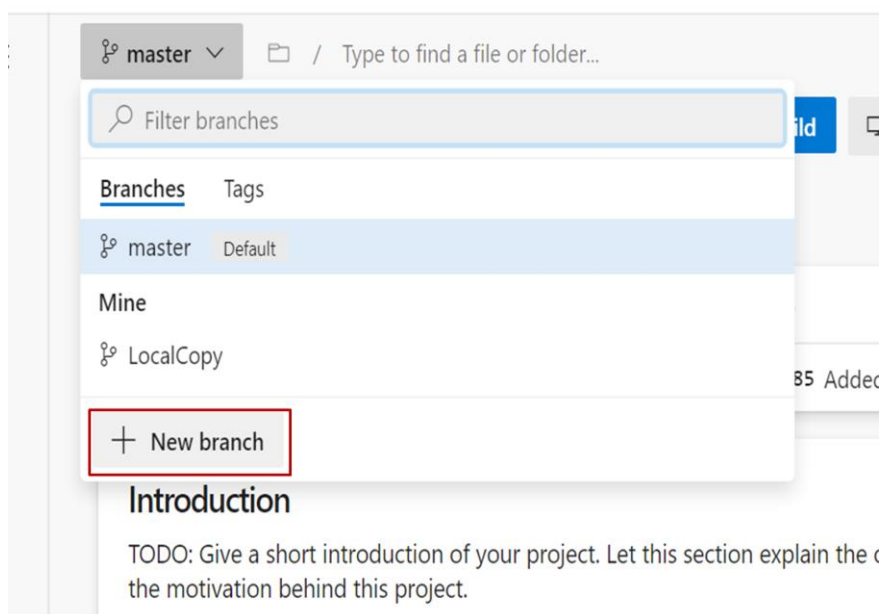

Step 3: Click on Create and create a new repository as shown below by clicking on “New Repository.” Click on Create Repository.

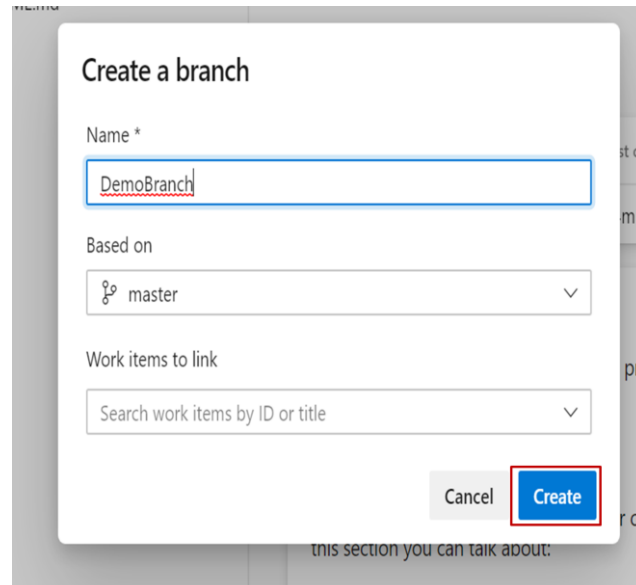

Step 4: Create a new branch from the Master Branch as described in the below image.

Step 5: Add the information and click on create.

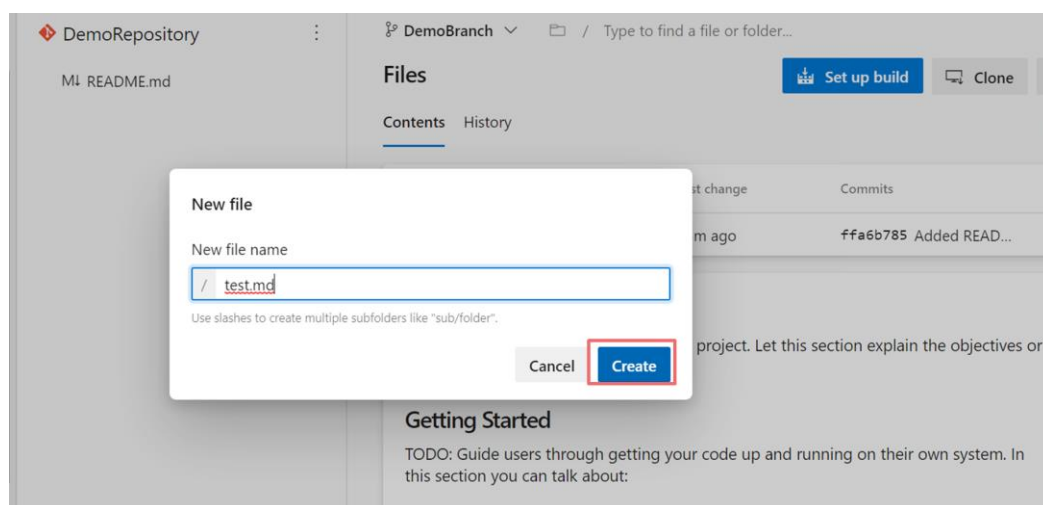

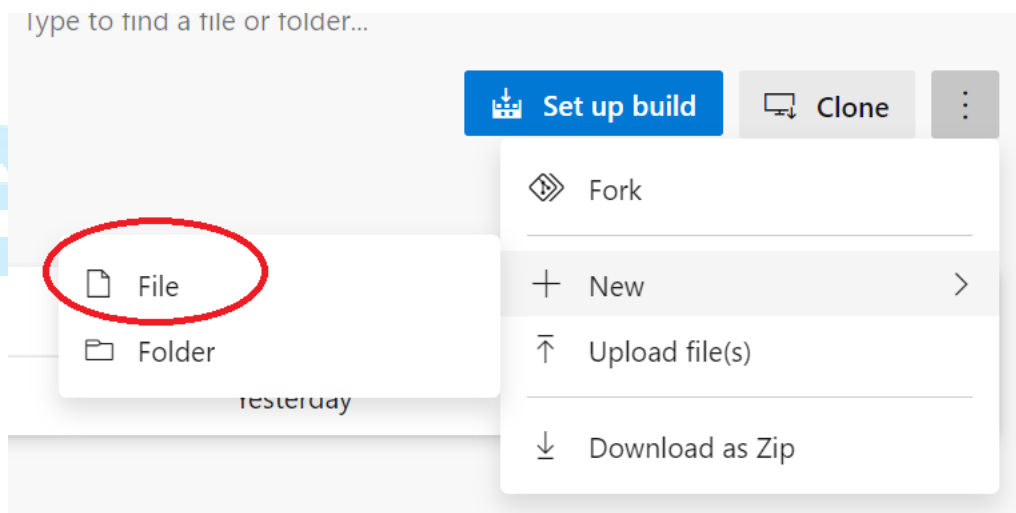

Create a branch

Name *

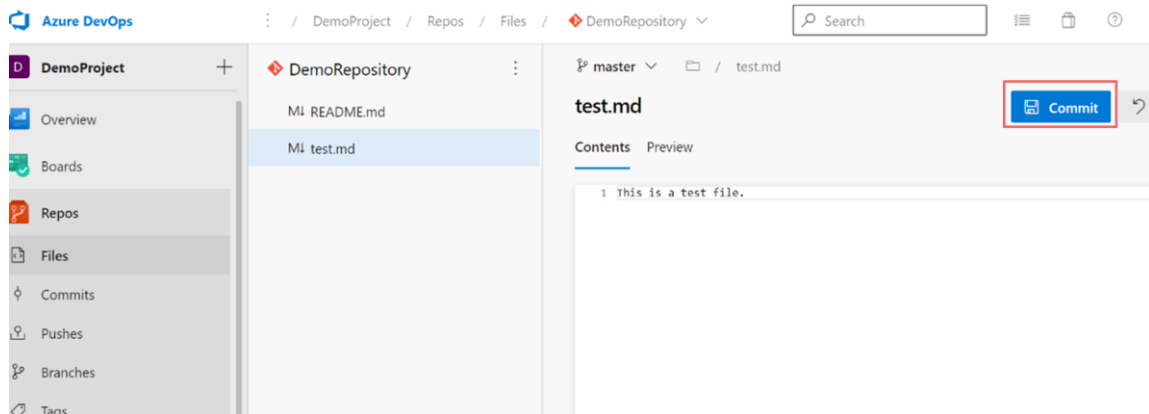

Based on

Work items to link

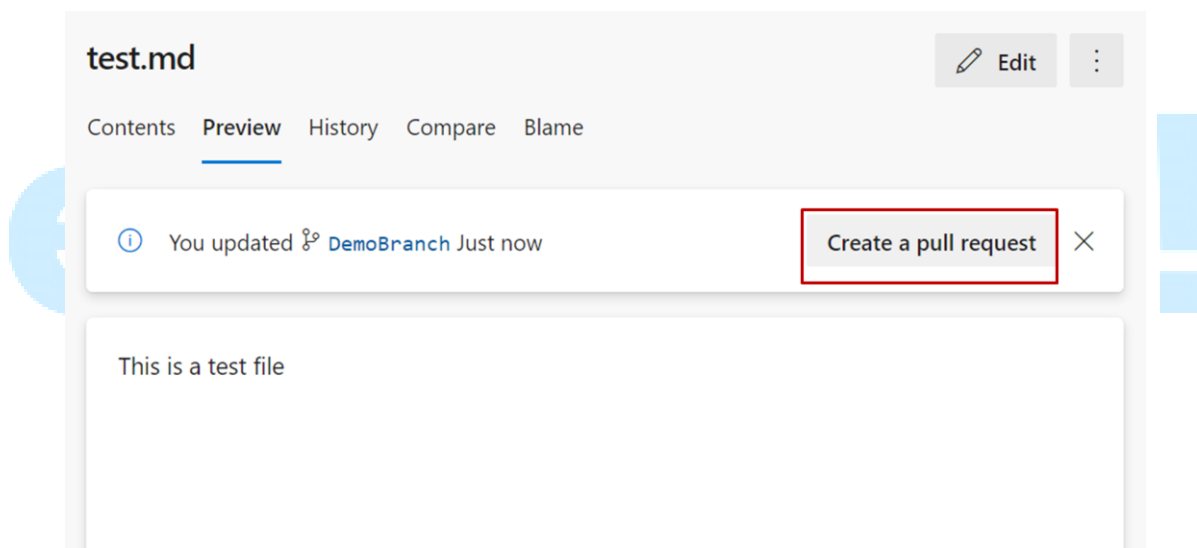

Step 6: Add a new file Test.md and click on create as shown in the below images.

Step 7: Add some content to this file and click on Commit to commit the changes.

Step 8: Create a pull request, as shown below. Click on the Pull Request. This will create a pull request, and the request will go to the reviewer for approval.

Once approved, the code can be merged into the main branch.

edureka!
